

OAG's Megahubs - Where are they now?

Posted on December 8, 2020 by Business Editor

Our annual review of the Most Connected Airports in the World - Megahubs has taken a different steer this year as any rankings will have had the impact of Covid 19 inevitably at the heart of them.

That said - tracking our Megahubs and understanding their recovery path will be a critical story in 2021 so through our new visual series Hubwatch, we take a look at the Top 20 most connected airports in the world (as they were in 2019) and how connected globally they are are right now compared to last year.

We have identified the distribution of their international networks by region between October 2019 and October 2020 and plotted this on a series of radar charts. We show for each of the Top 20 Megahubs in 2019, their network by region - across Africa, Asia, Europe, the Middle East, North America and Latin America. You can switch the view between each period or view them overlaid. A stark comparison for many airports but we can only hope that all our OAG Megahubs return to their 2019 position and go from strength to strength in future.
